

VVR Framework

Linux Build Instructions

1. Install:

- git
- Cmake
- [QtCreator](#)
 - sudo apt-get install build-essential
 - sudo apt-get install qtcreator
 - sudo apt-get install qt5-default

2. Download:

[VVR Framework](#)

3. Build:

- mkdir build
- cd build
- cmake ..
- make -j4
- sudo make install

4. CMakeLists:

Download the code and build it using the CMakeList from: [CMakeLists.txt](#)

➤ If the following error occurs,

```
./Lab0: error while loading shared libraries: libVVRScene.so: cannot open shared  
object file: No such file or directory
```

Try: sudo ldconfig
